Start with a useful task

Follow the official sources for the tools shown in this reel.

Separate code and weights

The LTX-2 repository and LTX-2.5 model are related but have different licenses. Read the current model card, supported inference route and weight agreement before downloading.

Check your machine

Confirm GPU, memory, storage and operating-system requirements for the selected workflow. The source’s local-computer demonstration does not prove that every laptop or Mac can run the same quality and speed.

Write a short shot plan

Begin with one controlled scene, authorized references and a clear duration. Specify subject, action and camera behavior without trying to solve an entire film in one request.

Check the real result

Keep a repeatable example and review the actual output.

Keep shot continuity

For a multi-shot test, record the character reference, scene order and transition requirements. Compare adjacent shots for identity, direction and background continuity.

Inspect picture and sound

Watch the actual render at normal speed. Check anatomy, motion, text, audio timing and export format. Save seeds and settings where supported.

Plan the real cost

Local processing still uses hardware, power and disk space; hosted inference has its own account costs. Software and model licenses do not grant rights to third-party reference footage.

Official sources

Consult current upstream setup, licenses and service terms.

Resource and access

The word LTX refers to this guide only on its matching reel. The free resource requires no follow, email address or purchase. The bio link for 3RD DESIRE products is separate.

Licenses and provider terms

Official sources checked on 9 November 2026. Read each project license and notices before modifying or redistributing software. Model, hosted-service and third-party media terms are separate; confirm their permitted uses and costs for your workflow.
