Start with a useful task

Follow the official sources for the tools shown in this reel.

Map your actual workload

List image, video and audio tasks separately. The source describes accessing several model families through one API key; capabilities and input fields still differ by endpoint.

Check account terms

Read your current wallet, expiration and failed-job policies in the official account documentation. Do not assume the source’s historical billing claims apply to every plan or every failure.

Review one request

Choose an authorized test asset and a small output. Inspect model, duration, resolution, account and expected usage before submitting.

Check the real result

Keep a repeatable example and review the actual output.

Prevent duplicate work

Record each request and job ID. After a timeout, check its status before creating another job. Keep application retries deliberate and bounded.

Handle results clearly

Separate queued, running, completed and failed states. Download only the documented successful output and keep the actual error when a request fails.

Retain an audit trail

Save settings, output and actual deduction together. Credentials remain private. A local setup or API example is not proof of a successfully generated video.

Official sources

Consult current upstream setup, licenses and service terms.

Resource and access

The word KEY refers to this guide only on its matching reel. The free resource requires no follow, email address or purchase. The bio link for 3RD DESIRE products is separate.

Licenses and provider terms

Official sources checked on 9 November 2026. Read each project license and notices before modifying or redistributing software. Model, hosted-service and third-party media terms are separate; confirm their permitted uses and costs for your workflow.
