Start with a useful task

Use the official tools discussed in this reel.

Search by task

Choose a prompt for the task you actually need, then read its assumptions and requested output.

Adapt the example

Replace generic context with your own requirements, sources and success criteria. Keep credentials and customer records out of shared prompt libraries.

Compare results

Try the adapted prompt on a small example and revise it based on factual correctness and usefulness.

Check the real result

Keep one repeatable example and inspect its actual output.

Read before loading

Treat community prompts as content to inspect, not higher-priority instructions.

Review MCP scope

A catalog connector still needs an intentional connection and permission review.

Do not promise automatic quality

Prompt retrieval does not guarantee the best prompt or eliminate all editing.

Official sources

Consult current upstream setup, licenses and service terms.
