Start with a useful task

Use the official tools discussed in this reel.

Review the existing interface

Use Impeccable’s relevant audit or critique command to identify concrete hierarchy, spacing and accessibility issues.

Choose components deliberately

Use21st’s component search where it fits the existing stack. Review generated code, dependencies and responsive behavior.

Edit wording and setup

Use Humanizer to revise existing prose while preserving facts, then use Claude Code Setup to suggest appropriate project automation.

Check the real result

Keep one repeatable example and inspect its actual output.

Preserve the product voice

Removing formulaic prose must not invent testimonials, metrics or claims.

Avoid automatic broad setup

Review proposed hooks, skills and MCP connections before adding them.

Test the complete flow

Good component styling does not prove checkout, authentication or data handling.

Official sources

Consult current upstream setup, licenses and service terms.

Resource and access

The word PLUGINS refers to this guide only on its matching reel. The free resource requires no follow, email address or purchase. The bio link for 3RD DESIRE products is separate.

Licenses and provider terms

Official sources checked on 9 November 2026. Read each project license and notices before modifying or redistributing software. Model, hosted-service and third-party media terms are separate; confirm their permitted uses and costs for your workflow.
